On the Cover

The world's first electronic digital computer was designed and built at Iowa State University from 1939-1942 by physics professor John V. Atanasoff and his graduate student Clifford Berry. An authentic replica of the Atanasoff-Berry Computer has been built by a team of Iowa State faculty and students and will go on a public tour starting in October, 1997, at a formal unveiling in Washington DC. An illustration of the replica is at right.

Iowa State University of Science and Technology is an Iowa State Board of Regents institution.

Data Network Information

The Iowa State University Data Network provides connectivity between computers, terminals, and local area networks throughout campus. This gives users the ability to access any machine on the data network with the appropriate software.

Connecting to Campus Inbound Modems

The inbound modems are connected to a terminal server that provides direct access to the Ethernet network. The modems support speeds from 300 bps to 14.4 kpbs and MNP5 and LAPM data compression. To access these modems, dial:

> 268-enet
> (268-3638)

After your modem's "connected" message appears, enter your Project Vincent username and password. A menu will then be presented.

Connecting to Campus Outbound Modems

Using the outbound modem pools, callers may connect to off-campus systems reachable by modem. Both modem pools are Hayes-compatible and support up to 14.4 kbps connections, with speed setting controlled automatically. Additional features such as auto-reliable mode and data compression are activated automatically if the answering modem supports them.

To use the outbound modems:

From ISN:

At the "DIAL" prompt:

TYPE modem
PRESS <RETURN>
When the campus network replies with "ANSWERED", the terminal is connected to an outbound modem.
TYPE ATZ
PRESS <RETURN> to reset the modem to its default settings. When "OK" appears on the screen, you are ready to call out from the network.

> For more information or assistance contact:
> **Solution Center**
> **195 Durham Center**
> **296-6000**

From Ethernet:

Telnet to modem.iastate.edu. When the connection has been established, you are connected to an outbound modem.

TYPE ATZ
PRESS <RETURN> to reset the modem to its default settings. When "OK" appears on the screen, you are ready to call out from the network.

To place on-campus calls:

TYPE ATDT 4XXXX
PRESS <RETURN>

To place off-campus local calls:

TYPE ATDT+ 8 + seven digit number
PRESS <RETURN>

NOTE

When placing long distance calls using the outbound modems, you must use an authorization code or calling card; you will be charged regular long distance toll rates.

To place long distance calls:

TYPE ATDT
8 + 1 + area code
seven digit number
W
authorization code or calling card
PRESS <RETURN>

The "W" tells the modem to wait for the dial tone before dialing your authorization code.

When the modem connects to the remote system, "CONNECT" (speed) (mode) is displayed, where (speed) indicates the baud rate, and (mode) indicates special features such as RELIABLE or COMPRESSED.

Press <RETURN> a few times to get a login prompt; then log in as usual. When you finish, follow appropriate logout procedures; then hang up from the modem by entering the disconnect sequence (<BREAK><BREAK>).

Point-to-Point (PPP) 268-4PPP

Enhanced remote networking is available through PPP service utilizing 33.6K inbound modems This gives users the ability to run applications such as Telnet, FTP and WWW browsers. Use of PPP service is billed to a personal account through the Accounts Receivable Office. A Project Vincent account is required. Instructions for obtaining a Project Vincent account are available in 195 Durham Center.
To request PPP service log in to Project Vincent:

TYPE request
SELECT PPP access

Answer the questions at each prompt.

Connecting to the PPP server:

The supported software packages from the Computation Center are preconfigured to set up the connection. Information is available in the Solution Center, 195 Durham. With other software packages dial 268-4PPP (268-4777).
